29 November
Edith Cowan University, Mt Lawley

KEYNOTE SESSION

Friday 29 November 2024

AI and the Art of Crafting - Leverage a new set of tools to create.

Hall Jackson

Hall Jackson is an educator and trainer with worldwide experience in both K-12 and adult learning. He has taught in Australia, the UK and Japan. Hall helps educational organisations employ technologies to enhance student learning, improve teaching and learning and outcomes.

He enjoys helping schools to maximise their return on IT investment by making sure that the infrastructure, management, software, devices and staff training work together to make the technology effectively disappear so teachers can focus on teaching.

Hall has been using computers since he had a CPC464 and through a range of roles both in education and industry has been able to stay abreast of technologies for teaching. With the explosion of Generative AI, he has been exploring what that means for industry, makers, crafters and hobbyists, whether it will be another tool to the belt or the beginning of the fall of good design.
